

## **Blurb**

400 years ago, an Italian chess master, Gioacchino Greco, discovered an extraordinary bishop sacrifice on h7 that often leads to checkmate or a significant material advantage. More amazing still: he recorded the idea!

This book chronicles the history of that idea, what many have come to call the Classic Bishop Sacrifice, from its discovery and formative years through its more complex uses in modern chess.

During the past century, several annotators have attempted to explain the circumstances under which the sacrifice works, and when it doesn't. Edwards reviews their efforts and, in a spectacular ninth chapter, provides a modern classification. His taxonomy of the sacrifice is comprehensive and full of surprises for beginners through accomplished masters.

This book represents a thematic approach to chess tactics and strategy. Careful readers will discover that they are suddenly able, quickly and accurately, to see 5-10 moves or more ahead in these lines.

Here you will find hundreds of carefully annotated games. Learn from brilliant moves and strategies; and take full advantage of others' instructive mistakes.
